

### Your Satisfaction is important to us.

As one of the largest manufacturers of building materials in North America, KP Building Products is renowned for offering a vast array of innovative, industry-leading products.

For KP's vinyl products, this means using the finest polymers and pigments in our manufacturing process. It means continually creating new, stronger, more attractive designs. And it means backing it all up with a lifetime limited warranty.

See the full warranty for details. Warranties are available from your KP distributor or on our website @ [www.KPproducts.com](http://www.KPproducts.com)

### KP is a company with a superior winning track record.

- #1 vinyl siding in a leading consumer magazine (Norman Rockwell siding)
- #1 in vinyl siding color choices
- #1 in fade resistant vinyl siding

**KP Building Products:  
We make everything you build with.**

KP Building Products is committed to the building materials industry, with 10 facilities, and more than 1,500 employees in North America. When it comes to the exterior home design there is no one more passionate about vinyl than KP. This passion runs in the family. For over four decades, KP has remained focused on delivering the highest level of quality and the most extensive array of vinyl siding and accessories.

**With even higher standards  
from today's advanced technology.**

KP Building Products maintains its own Advanced Technology Center for continuous product improvement and development. A strong commitment to quality, consistency, color retention, strength, rigidity and durability applies to all our vinyl siding products.

- Maxim Ultra-Vinyl™ UV Technology premium vinyl compounds and UV inhibitors are used to combat the harsh rays of the sun.
- The low-gloss, rough cedar texture creates a surface so real, it feels like it could give you splinters.
- Maxim vinyl siding's self-aligning locking system is designed to snap together with a positive connection, while allowing for flexibility in panel position during installation.
- Maxim is manufactured to a premium thickness of .046" for outstanding impact resistance and strength.
- A full 3/4" profile provides dramatic shadows and the authentic look of a true board and batten siding. It also adds rigidity for a straighter appearance on the wall.

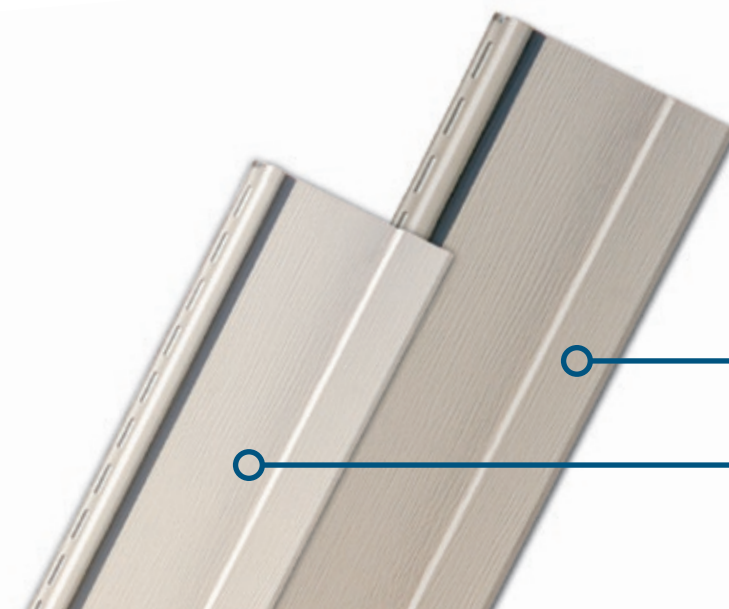

**The authentic, rough-grained look and feel of Maxim Board and Batten**

**You can't get any closer to real wood and still be vinyl.** We're the next best thing. Every siding manufacturer will claim their products look like wood. At KP Building Products, our Maxim molds are taken from actual cedar panels, resulting in a mirror-image surface that could fool even a discriminating wood connoisseur.

**Maxim Board and Batten with a virtual cedar wood grain is real-time low maintenance.**

Enjoy the look of wood, without the worry. That wood siding you long for may be beautiful when it is new or freshly painted, but its beauty is short-lived. Maxim Board and Batten looks like you spent the money for an expensive wood siding installation, and instead of scrapers and paintbrushes, you'll be using a garden hose from time to time to maintain its appearance. It's amazing peace of mind, backed by a lifetime limited warranty. Check our website for details and a copy of the warranty.

**Maxim looks like real wood up close and on the wall, too.**

Our low-gloss cedar texture is just the start. Maxim Board and Batten siding is wider and more realistic than most competitive board and batten vinyl sidings. It's a full 8" exposure, with a 6 1/4" face and a 1 5/8" batten. Maxim vinyl siding has a premium thickness of .046" for outstanding durability and rigidity. And a more rigid siding can hang flatter on the wall for a better installed appearance.

● Maxim Board and Batten has a full 8" exposure, with a 6 1/4" face a 1 5/8" batten.

● The competitor's face, exposure and batten are all narrower than Maxim's.
